

Metro Optics Solutions

Basis Plug-&-Play's CWDM or DWDM, solution empowers your optical infrastructure with new life & dimension. Using technology that was used only by the Telcos and now, Basis has scaled down the sophistication of the technology to a nearly Plug-&-Play solution for your corporate environment.

Upscale the WAN or Optical WAN from 1GE or 10GE to a factor of 4, 8, 16, 40*.per fiber pair and supports a metro distance of up to 80Km.

Basis has the solution & the capability in bringing your network to a higher level of speed & Bandwidth while still having your investment protection in mind. Therefore, your major network equipment invested are able to work seamless with the deployed solution.

The following are Basis' Passive relatively Plug-&-Play Optical solutions,

Passive CWDM	Passive DWDM
<p>The CWDM solution empowers your fiber pair to transmit up to 16 connections of different standards, data rates or protocols over the fiber optic link. The fully passive optical technology makes it ease for maintenance hence no power is required to therefore, making the backbone / WAN connection very robust. With each channel up to 10Gbps per Channel.</p>  <p style="text-align: right;">CWDM Solution</p>	<p>The passive DWDM solution provides an advanced technology for the corporate that requires more Bandwidth & higher rate of transmission, more than 40 connections of different standards, data rates or protocols over the fiber optic link, with each channel up to 10Gbps per Channel.</p>  <p style="text-align: right;">DWDM Solution</p>  <p style="text-align: right;">DWDM riding on CWDM Infra</p>

*40 Channels solution will require DWDM technology to support
